

Product Store

The "Product Store" is a central service that provides information about the products offered by InterNetX. The product information can be retrieved via a REST API.

Table of Contents

- 1 [Address](#)
- 2 [Documentation](#)
- 3 [Certificate Product Routes](#)
 - 3.1 [GET /ssl](#)
 - 3.2 [GET /ssl/_paginate](#)
 - 3.3 [GET /ssl/{label}](#)
- 4 [TLD Product Routes](#)
 - 4.1 [GET /tld](#)
 - 4.2 [GET /tld/_paginate](#)
 - 4.3 [GET /tld/{label}](#)

Address

The interface can be reached under the following URL: <https://api.autodns.com/productstore/v1>

Documentation

The interface is fully documented with Swagger. The Swagger file can be found in the [Official InterNetX Github Repository](#).

Certificate Product Routes

GET /ssl

The route GET /ssl lists all certificate products and outputs them in JSON format.

GET /ssl/_paginate

The route GET /ssl/_paginate lists all certificate products and returns them within a pagination object. The output is in JSON .

GET /ssl/{label}

The GET /ssl/{label} route displays information about a specific certificate product. The output is in JSON format. If no product is found for the given "label", a 404 HTTP code is returned.

TLD Product Routes

GET /tld

The route GET /tld lists all TLD products and outputs them in JSON format. The list can be filtered using various parameters.

GET /tld/_paginate

The route GET /tld/_paginate lists all TLD products and returns them within a pagination object. The output is in JSON. The list can be filtered with different parameters.

GET /tld/{label}

The GET /tld/{label} route displays information about a specific TLD product. The output is in JSON. If no product is found for the given "label", a 404 HTTP code is returned.
