

Additional API Functions

This area includes further APIs and tools offered by InterNetX.

Domain Data Import

The [Domain Data Import](#) API offers the possibility to import domains and other objects into our system comfortably and easily.

Email Parser

The [Email Parsing Quick Guide](#) gives you helpful tips on how to analyze responses from our API.

NameStudio™ API

The [NameStudio™ API](#) allows you to generate domain name suggestions based on a variety of criteria. The NameStudio™ API is based on the Versign API.

Order Process Description

This [Quick Guide](#) describes the processes for purchase orders and other processes.

ProductStore

The [ProductStore](#) is a central collection point for information about InterNetX products. The API offers the possibility to retrieve the information via REST Call.

WhoisProxy

The [WhoisProxy](#) enables a quick check of the availability of domains of the TLDs offered by InterNetX.

XML Price List

The individual [XML Price List](#) contains the regular prices and the promo prices for domains, trustees, premium price classes¹ and SSL certificates.
