  </object>
</msg>
```

Code Example

Where Component Java

```
@XmlElement(name = "msg")
public class Message {

    @XmlElement(name="code")
    private String code;

    @XmlElement(name="text")
    private String text;

    @XmlElement(name="object")
    private SimpleObject object;

    /* Getter + Setter */
}
```

Where Component PHP

```
class Message {

    /**
     *
     * @var type String
     */
    public $code;

    /**
     *
     * @var type String
     */
    public $text;

    /**
     *
     * @var type SimpleObject
     */
    public $object;

    /* Getter + Setter */
}
```

Where Component C#

```
public class Message {

    private String code;

    private String text;

    private SimpleObject object;

    /* Getter + Setter */
}
```
